

Is talamh féarach, cothrom, le cósta é Machair, talamh nach bhfuil ach ar chósta thiar na hAlban agus na hÉireann agus tá Oileán Árann ar an bpíosa is faide ó dheas den dáileadh seo. I gcás Machair ní theastaíonn ach beagán innithe agus bainistithe le luach ard caomhnaithe na gnáthóige a chothabháil. Is Gnáthóig le stádas tosaíochta é Machair atá liostaithe in larscríbhinn 1 Threoir an AE maidir le Gnáthóga. Is gnáthóga tábhachtacha iad Machair na n-oileán freisin do speiceas éan goir ar nós Pilibní agus Clochrán (Lysagh 2002). Tá neadú Pilibní sna féara Machair coitianta in Oileán Árann ach iad ag éirí an-ghann in áiteanna eile.

Is ábhar caomhantais in Éirinn iad roinnt de na héanacha a bhíonn ar Oileán Árann. Is ábhar mór caomhantais iad na speicis ar an Liosta Dearg ●, ábhar meánach caomhantais iad speiceas an Liosta Ómra ○ agus ábhar íseal caomhantais iad speiceas an Liosta Uaine ● (Colhoun & Cummins 2013) agus tá na speicis seo á dtaispeáint thíos.

Colhoun, K. and Cummins, S. (2013). Birds of Conservation Concern in Ireland 2014-2019. Irish Birds 9: 523-544.

Lysagh, L. (2002). An Atlas of breeding birds of the Burren and the Aran Islands. Bird Watch Ireland.

Machair is a flat, coastal grassland that only occurs on the west coast of Scotland and Ireland with the Aran Islands marking the most southern station of its distribution. Machair requires low intensity grazing and management to maintain the high conservation value of the habitat. Machair is a priority habitat listed in Annex 1 of the EU Habitats Directive. Machair on the islands are also important habitats for breeding bird species such as Lapwings and Wheatear (Lysagh 2002). Lapwing nesting in Machair grassland is a common occurrence on the Aran Islands that is becoming increasingly rare elsewhere.

Some of the birds on the Aran Islands are birds of conservation concern in Ireland. The Red List species ● are of high conservation concern, Amber List species ○ are of medium conservation concern and Green List species ● are of low conservation concern (Colhoun & Cummins 2013) and these species are shown below.

Éanacha a lonnaíonn ar na feirmeacha agus sna bailte ar Oileán Árann Birds of Farms & Villages

Is gnáthóga tábhachtacha foráiste agus neadaithe iad féara feirmithe na n-oileán do réimse speiceas éan. Tá 53 speiceas ar fad d'éanacha goir taifeadta ar thrí Oileán Árann (Lysagh 2002).

Soláthraíonn féara cailcreacha speiceas-shaibhir agus móinéir férar tirim na n-oileán bia do na héanacha a itheann síolta, leithéidí an Lasair Choille, agus is gnáthóig neadaithe iad d'éanacha a dhéanann a gcuid neadacha ar an talamh ar nós Pilibní, Crotaigh agus Fuisseoga.

Braitheann speiceas éan ar nós an Chág ar fhéara innithe a bhíonn bainistithe go traidisiúnta agus ina mbíonn cruimh agus feithidí mar go n-itheann siad cuid mhaith acu seo. Tá laghdú tagtha ar an gcág sna ceantair ina bhfuil laghdú ar innilt (www.birdwatchireland.ie).

The farmed grasslands of the islands provide important foraging and nesting habitats for a range of bird species. In total 53 breeding bird species have been recorded on the three Aran Islands (Lysagh 2002).

The species-rich calcareous grasslands and hay meadows of the islands provide food for seed eating birds such as goldfinch, and nesting habitat for ground nesting birds such as Lapwings, Curlews and Skylarks.

Bird species such as the Chough rely on grazed grasslands that have been managed traditionally and support grubs and insects that are an important part of their diet. Numbers of Chough have declined in areas where grazing pressure has decreased (www.birdwatchireland.ie).

Togra AranLIFE AranLIFE Project

Tá an togra AranLIFE ag obair le feirmeoirí ar thrí Oileán Árann, ag forbairt agus ag cur chun cinn cleachtais feirmeoireachta traidisiúnta agus inbhuanaithe, a rachaidh chun tairbhe do thimpeallacht nádúrtha na nOileán. Beidh an togra i bhfeidhm ó 2014 go 2017 agus tá sé á mhaoiniú trí Chiste LIFE Nature an AE (maoiniú 75% ó LIFE, 25% ó chompháirtithe an togra in Éirinn). Díronn an togra ar na cleachtais feirmeoireachta a chruthaigh tídreach aitheanta Árann agus ar ar bunáiodh suíomhanna Natura 2000 na n-oileán (suíomhanna a thugann cosaint do ghnáthóga agus speicis a bhfuil tábhacht Eorpach leo). Bainfear leas as eolas agus as taithí feirmeoirí áitiúla thar na céadta bliain chomh maith le saineolás eolaíoch pháirtithe an togra chun na dúshláin a bhaineann le feirmeoireacht ar oileán a shárú agus freisin chun stádas caomhnaithe na suíomhanna Natura a fheabhsú.

The AranLIFE project is working with farmers on the three Aran Islands to develop and promote traditional and sustainable farming practices to benefit the Islands' natural environment. It will operate from 2014-2017 and is funded through the EU LIFE Nature Fund (75% LIFE funding; 25% Irish project partners). The project focuses on the farming practices that created the iconic Aran landscape and led to the designation of the islands' Natura 2000 sites (sites to protect habitats and species of European importance). It will harness centuries of local farming knowledge and experience with the scientific expertise of project partners to overcome the challenges of island farming and to improve the conservation status of the Natura sites.

LIFE+ Nádúr & Bithéagsúlacht LIFE+ Nature & Biodiversity

Tá LIFE+ DÚLRA AGUS BITHÉAGSÚLACHT ar cheann de phríomhshnáithe chlár maoinithe an Aontais Eorpach don chomhshaol. Tacaíonn sé le tionscadail a chuidíonn le feidhmí Threoracha an AE maidir le hÉin agus Gnáthóga, le lónra Natura 2000 agus le sprioc an AE maidir le stop a chur le cailleantas bithéagsúlachta.

LIFE+ NATURE AND BIODIVERSITY is one of the main strands of the European Union's funding programme for the environment. It supports projects that contribute to the implementation of the EU's Birds and Habitats Directives, the Natura 2000 network and that contribute to the EU's goal of halting the loss of biodiversity.
